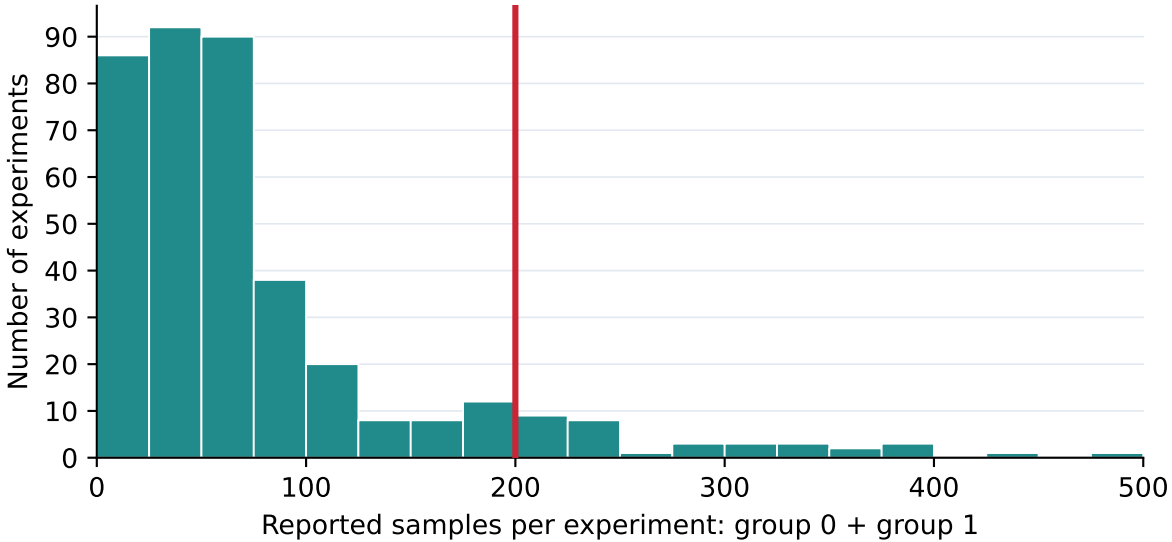
How large are the oral BugSigDB experiments?

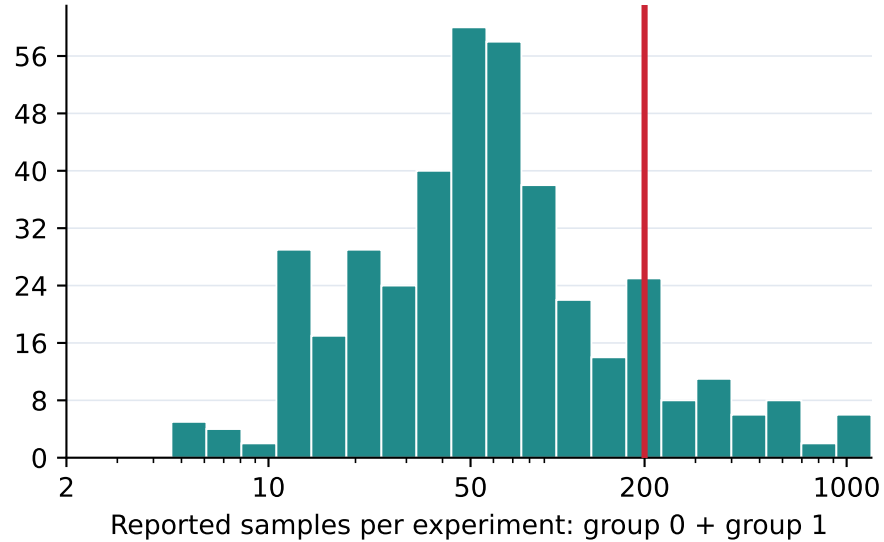
408 experiments with reported group sizes from 136 studies | Median n = 54

200 exceeds 86.8% of reported experiment totals

Detail: n ≤ 500 (20 larger experiments at right)



All reported totals (logarithmic x-axis)



Red line: reference study with 200 samples (100 disease + 100 healthy)

Oral heatmap cohort: 425 experiments; 17 lack usable group-size totals. Each experiment counted once.

Reported group-size sums may reuse participants within or across experiments. Reference is not added to the histogram.
